

Support structures and the stakeholders system

The Challenge: Not only Horizon Europe

Landscape: increasingly complex, interconnected and with strategic initiatives that require long-term positioning.

THREE PILLARS FOR IMPLEMENTATION

- Increasingly interconnected European programs, need expert knowledge.

+ Big strategic initiatives in which is crucial to be positioned from at source critical to results

Support structures and the stakeholders system

The Support structures are essential to optimize the Spanish participation in the European Research Framework Programme

Spain has a **solid system of stakeholders** supporting the Spanish participation in the EU R&D Framework Programme - with resources allocated for more than 20 years - and a structured system in which the different roles complement each other:

The **representatives and experts** defend the interests of the research community in the **Program Committees** and represent Spain according to EU Comitology standards.

The **National Contact Points** (a figure established by the EC) help researchers and centers by providing information and advice on open calls for proposals.

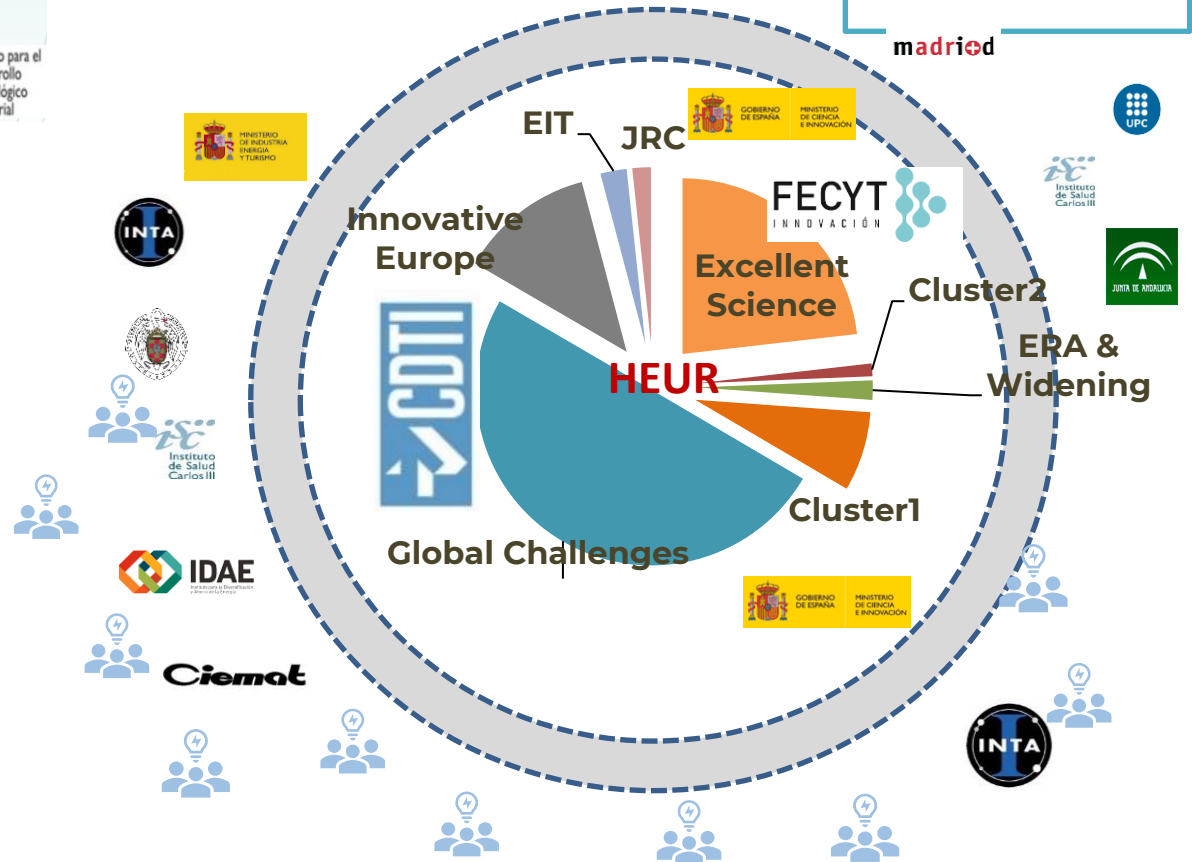

Support structures and the stakeholders system

Most of the NCPs belongs to CDTI and FECYT but reinforced by other "intermediate" entities that allow for greater outreach
